

## AD221: Cloud-native Integration with Red Hat Fuse and Apache Camel

Course Code: AD221

Duration: 3 days

Instructor-led Training (ILT) | Virtual Instructor-led Training (VILT)

### OVERVIEW

*Red Hat Fuse, based on the Apache Camel project, is a lightweight, flexible integration platform that enables rapid integration of cloud-native applications, both on-premise and in the cloud.*

Camel development is organized around:

- Routes that define a sequence or flow of processing.
- Processors that transform, interpret, and modify messages within a Camel route.
- Components that enable the creation of endpoints that interact with the outside world for acquiring and transmitting data.

Cloud-native Integration with Red Hat Fuse (AD221) emphasizes learning architectural patterns and implementing integration services based on Apache Camel and OpenShift. Camel and Red Hat Fuse enable developers to create complex integrations in a simple and maintainable format. You will learn how to use the most common integration components in Camel and develop, test, and deploy integration focused applications on OpenShift.

This course is based on Red Hat Fuse 7.10 and OpenShift 4.

### SKILLS COVERED

#### Impact on the organization

Accelerate cloud-native integration with Red Hat Fuse and Camel, resulting in less development time spent maintaining and designing integration solutions with enterprise patterns.

#### Impact on the Individual

As a result of taking this course, you will have a strong understanding of fundamental Camel concepts, commonly used Camel components and their configurations, and Camel deployment options. You will also develop a thorough grasp of enterprise integration patterns to solve integration problems.

You will be able to demonstrate these skills:

- Develop Camel routes to integrate systems such as JMS, FTP, Databases, and REST services.
- Filter and transform messages to create integration routes that are highly reliable.
- Develop tests and use mock components to thoroughly test routes.
- Create reliable routes by implementing transactional routes that prevent data loss.
- Deploy Camel routes to Red Hat OpenShift Container Platform.

### WHO SHOULD ATTEND?

- This course is designed for Java developers focused on implementing integration solutions in an enterprise.

### PREREQUISITES

- Experience with Java application development or [Red Hat Application Development I: Programming in Java EE \(AD183\)](#).
- Be proficient in using an IDE such as Visual Studio Code.
- Experience with Maven and version control is recommended, but not required.
- Experience with Red Hat OpenShift or [Introduction to OpenShift Applications \(DO101\)](#) is recommended, but not required.
- [Take our free assessment](#) to gauge whether this offering is the best fit for your skills.

## MODULES

### Module 1: Introduction to Red Hat Fuse and Camel

- Describe the architecture of Red Hat Fuse and Camel and how they are used to integrate applications.

### Module 2: Create Camel routes

- Implement Camel routes and develop custom processors

### Module 3: Implement enterprise integration patterns

- Describe the most commonly used enterprise integration patterns and implement them using Camel components.

### Module 4: Create tests for routes and error handling

- Develop reliable routes by creating unit tests and mocks, and by handling errors.

### Module 5: Integrate services using asynchronous messaging

- Integrate microservices using Apache Kafka and ActiveMQ (JMS)

### Module 6: Implement transactions

- Provide data integrity in route processing by implementing transactions.

### Module 7: Build and consume REST services

- Implement and consume REST services with Camel.

### Module 8: Integrate cloud-native services

- Deploy cloud-native microservices based on Camel Routes and Camel K components to an OpenShift cluster
